

Sun-N-Fun Lakeland, FL April 13th - April 18th

2010 was an exciting year at Sun-N-Fun for CGAR. The CGAR exhibit was part of the displays within the FAA Safety Center Hanger at Lakeland Fl. In this venue there was a heightened interest in what CGAR is all about.

Promoting the numerous general aviation research programs of the center attracted pilots of all ages. Weather Technology in the Cockpit was a focused presentation with members of CGAR from ERAU & UAA interviewing pilots to obtain information relative to pilot education and user needs along with the weather products a pilot would like to utilize for cockpit display purposes.

User feedback from the Aviation community at this event will prove to be invaluable for CGAR research both in the Weather in the Cockpit Technology area as well as Safety Management Systems and numerous other applied research programs CGAR presented during Sun-N-Fun 2010 in Lake Land Fl.
